Pune, Maharashtra, India

OBJECTIVE

Python Developer & Data Analyst skilled in building data-driven applications and dashboards using **Python, SQL, Pandas, and Power BI**. Experienced in data cleaning, exploratory data analysis (EDA), dashboard design, machine learning model development, and automated reporting workflows through academic and self-driven projects. Strong focus on clean code, data accuracy, process automation, and delivering actionable insights, with a keen interest in growing as a full-time data professional through an internship.

EDUCATION

Ajeenkya D Y Patil School of Engineering — Pune, India
Bachelor of Engineering in Artificial Intelligence and Data Science — 2024 – Present

Rajarshi Shahu College — Latur, India
Higher Secondary Certificate (HSC) - Science, 60.00%

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, HTML5, CSS3

Data Analysis & Visualization: Pandas, NumPy, Power BI, Tableau, Advanced Excel (Pivot Tables, VLOOKUP, Power Query)

Machine Learning: Scikit-learn, Regression

Databases: MySQL, PostgreSQL, MongoDB

Tools & Platforms: Jupyter Notebook, Git, GitHub, VS Code, Google Colab, Postman

Core Competencies: Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Statistical Analysis, Dashboarding & Reporting, ETL Basics, Data Storytelling

ACADEMIC & PERSONAL PROJECTS

Sales Performance Dashboard | *Python, Pandas, Power BI, SQL* [Live Link / GitHub]

- Cleaned and processed raw sales data from multiple CSV/Excel sources using **Python and Pandas** as part of a self-learning project, resolving missing values and inconsistent formatting.
- Built an interactive **Power BI dashboard** with DAX measures, drill-down filters, and trend visuals to practice tracking regional sales performance and KPIs.
- Connected Power BI to a SQL database to explore automated data refresh workflows.
- Presented sample insights on top-performing products and regions to practice data storytelling.

Customer Churn Prediction Model | *Python, Scikit-learn, Pandas, Matplotlib* [Live Link / GitHub]

- Built a machine learning pipeline as an academic project to predict customer churn using a public/historical dataset.
- Performed **EDA and feature engineering** to identify key churn drivers and strengthen model interpretability.
- Trained and compared **Logistic Regression, Decision Tree, and Random Forest** classifiers, evaluating performance using accuracy, precision, recall, and ROC-AUC.
- Visualized model results and feature importance using Matplotlib and Seaborn to communicate findings clearly.

Automated Data Pipeline & Reporting Tool | *Python, SQL, Pandas, Excel* [Live Link / GitHub]

- Developed a small Python-based **ETL pipeline** to extract data from a SQL database, clean and transform it with Pandas, and load it into structured reports.
- Automated generation of sample daily/weekly Excel reports to practice reducing manual data compilation effort.
- Implemented basic error handling and logging to make the pipeline more reliable and easier to debug.
- Scheduled report generation using Python scripts and Task Scheduler/cron for consistent, timely delivery.
